Computing

**Semester 01 2025/2026**

**Subject : Database Programming (SECP3623)**  
**Section : Section 1**  
**Task : Project I**  
**Due : 25<sup>st</sup> November 2025 (10%)**

| Name                  | Matric No. |
|-----------------------|------------|
| JOANNE CHING YIN XUAN | A23CS0227  |
| CHUA JIA LIN          | A23CS0069  |
| EVELYN GOH YUAN QI    | A23CS0222  |
| LIM YU HAN            | A23CS0241  |

### Instructions

Each group must submit **one (1)** project only.

Your submission must include:

1. **Project Report in PDF format** (named as LeaderName\_GroupNum\_ProjectI.pdf).
2. The **demo video URL** (YouTube or Google Drive link) **inside the report**.
  - o Make sure the link is **working, publicly accessible**, and does **not require login**.
3. Include all SQL script files (.sql) by attaching them directly, compressing them into one zip folder, or providing a valid OneDrive sharing link inside the report.

# 1.0 Introduction

## 1.1 Background of the Chosen Domain

In Malaysia, the PT3 examination for Form 3 students was officially discontinued. As a result, secondary schools now rely on a continuous assessment format that consists mainly of Midterm examinations and the Year-End Assessment (UASA). These assessments provide important academic indicators that help evaluate student performance and determine the most suitable academic pathway for Form 4.

The absence of PT3 has increased the need for efficient data management in school, especially particularly for tracking the performance of Form 3 students who will soon be placed into different Form 4 academic streams. Without PT3 as a standardized benchmark, teachers now depend entirely on Midterm and Year-End examinations to assess student strengths and readiness. However, many secondary schools still rely on spreadsheets or manual records to track large volumes of student performance data across multiple subjects, classes, and exam sessions. This leads to challenges such as data inconsistency, human errors, difficulties in monitoring student progress, and delays in producing analysis reports for teachers and administrators.

Therefore, a **Student Examination & Result Management System** is essential. This system automates data storage, retrieval, and analysis of examination data, performance analysis, and reporting using a structured MySQL database.

The database backend developed in this project supports complete management of:

- Student demographic details
- Subjects offered in Form 3
- Midterm and Year -End (UASA) examination structures
- Individual student marks and grades
- Analytical queries for performance reporting and decision-making

This system is designed to reflect real operations in Malaysian secondary schools and provides teachers with a reliable platform to record, monitor, and analyze student performance.

## 1.2 Objectives of the System and Database Backend

The objectives of this project are:

1. **To design and implement a MySQL backend database** that manages Form 3 student examination records, including students, subjects, exams, and results.
2. **To provide a structured efficient platform for teachers** to record, update, and retrieve examination performance based on the Midterm and Year-End (UASA)

assessment format.

3. **To support academic decision-making** by enabling teachers to analyze student performance through SQL queries such as averages, totals, highest/lowest marks, grade distribution, and academic streaming decisions.
4. **To demonstrate comprehensive SQL skills** through the use of DDL, DML, DQL, constraints, advanced queries (filtering, aggregation, functions, subqueries, joins, set operations), and indexing with query plan analysis.
5. **To ensure data accuracy and integrity** using proper constraints such as PRIMARY KEY, FOREIGN KEY, UNIQUE, CHECK, ENUM and ON DELETE CASCADE.
6. **To optimize database performance** through indexing (BTREE and FULLTEXT) and evaluation of query execution plans before and after index creation.
7. **To demonstrate a backend system capable of real school operations**, such as generating student lists, identifying top scorers, detecting missing results, and analyzing performance across exams, subjects, and classes to identify at-risk students.

### 1.3 List of Team Members and Assigned Roles

| Team Member           | Role                                                                                                                                                                                                                                                                               |

## 2.0 SQL Implementation Summary

### 2.1 Explanation of What Each .sql File Does

The .sql file creates and manages a complete database for Student Examination & Result Management System. It consists of four main parts.

#### A. Database Creation (DDL)

In this section, we create the database **student\_exam\_db** and four tables which are:

- **Student:** stores student information like student id, student name, matric number, class name, gender, and phone.
- **Subject:** stores the subject information such as subject id, subject code, and subject name.
- **Exam:** stores the exam types (Midterm or YearEnd) for each subject.
- **Result:** stores students' marks and grades for each exam.
- **TempExamNotes:** This table is deleted from the database using DROP TABLE.

#### B. Data Manipulation (DML)

In this part, we insert:

- **45 students** including Malay, Indian, and Chinese students.
- **11 subjects** including Bahasa Melayu, Bahasa Inggeris, Bahasa Cina, Bahasa Tamil, Matematik, Sains, Sejarah, Geografi, Asas Sains Komputer, Reka Bentuk dan Teknologi, and Pendidikan Islam.
- **22 exams** including Midterm and YearEnd for each subject.
- **720 results.** There are a total of 45 students, and each of them takes 8 subjects, and they have 2 exams for each subject. ( $45 * 2 * 8 = 720$  results)

Then, we perform operations to:

- **UPDATE** student's name **WHERE** matric number is M0001.

- **DELETE** student **WHERE** matric number is M0045 (This student's results are deleted too due to ON DELETE CASCADE). This causes the number of students to decrease to 44, and the number of results decreased to 704 records.

## C. Data Retrieval (DQL / SELECT)

In this section, we extract some meaningful insights.

### 1. Filtering

- **WHERE** and **AND**: Filter Male students in class "3A".
- **OR**: Filter students who scored grade A or B for Mathematics and Science to determine who is suitable for Science Stream.
- **NOT**: Filter subjects that are not language subjects.
- **BETWEEN**: Filter students with borderline marks for each subject.
- **LIKE**: Filter students' names that begin with "A".
- **NULL**: Find students missing any exam results.

### 2. Sorting

- **ORDER BY**: Sort students by alphabetic order.
- **LIMIT**: Sort Top 5 students' marks for BM Only

### 3. Aggregation

- **COUNT**: Count total number of students by class.
- **SUM**: Get total marks for each student.
- **AVG**: Get average marks for each student.
- **MAX**: Get highest mark for the subject Bahasa Melayu (BM).
- **MIN**: Get lowest mark for the subject Sejarah (SEJ).

### 4. Grouping and filtering groups

- **GROUP BY with HAVING:** Find classes with average marks > 70 in all subjects.
- **GROUP BY with HAVING:** Find subjects where less than 10 students scored grade 'A'

## 5. Numeric and string functions

- **ROUND:** Calculate average marks rounded to 2 decimal places for each subject.
- **TRUNCATE:** Calculate average marks truncated to 1 decimal place.
- **UPPER:** Display all subject names in uppercase.
- **LENGTH:** Find student names with more than 15 characters.
- **CONCAT:** Create student info with formatted display.
- **SUBSTR:** Extract first 3 characters of matric number to identify batch.
- **SUBSTR:** Create student email using first name and matric number.

## 6. Conditional logic

- **CASE WHEN:** Assign performance category based on grade for Class 3A students in Year-End Sains exam.

## 7. Subqueries

- **Single-row subquery:** Find students who scored highest in BM.
- **Multiple-row subquery:** Find students who scored grade 'A' in Mathematics or Science for Year End exam.
- **Correlated subquery:** Students in Class 3A who scored above average in Matematik for YearEnd exam.

## 8. Set operations

- **UNION:** List all students in 3A and 3B (without duplicates).
- **NOT EXISTS:** Find students who never scored grade 'F'.

## 9. Joins

- **NATURAL JOIN:** Show student marks with subject info.
- **INNER JOIN:** List students with marks for Science stream subjects (YearEnd exam only).
- **LEFT OUTER JOIN:** Show all students in Class 3A and their YearEnd Matematik marks (including missing).
- **SELF JOIN:** Compare students in Class 3A for YearEnd Matematik exam.

## D. Indexing and Optimization

In this part, we create some indexes:

- **BTREE Index** on marks column for faster mark-based queries.
- **TEXT Index** on student\_name for faster text searches.
- **Additional indexes** on class\_name, subject\_id, and student\_id with exam\_id for optimization.

## 2.2 Example Snippets of Important SQL Statements

In this part, we will show the example snippets of important SQL statements.

### 1. CREATE TABLE

```
-- Student table that stores basic student information
CREATE TABLE Student (
    student_id INT PRIMARY KEY AUTO_INCREMENT,
    student_name VARCHAR(100) NOT NULL,
    matric_no VARCHAR(20) UNIQUE NOT NULL,
    class_name VARCHAR(20) NOT NULL, -- 6A
    gender ENUM('Male','Female') NOT NULL
);
```

### 2. INSERT

```
-- Insert Subject data (11 subjects)
INSERT INTO Subject (subject_code, subject_name) VALUES
('BM', 'Bahasa Melayu'),
('BI', 'Bahasa Inggeris'),
('BC', 'Bahasa Cina'),
('BT', 'Bahasa Tamil'),
('MM', 'Matematik'),
('SN', 'Sains'),
('SEJ', 'Sejarah'),
('GEO', 'Geografi'),
('ASK', 'Asas Sains Komputer'),
('RBT', 'Reka Bentuk dan Teknologi'),
('PI', 'Pendidikan Islam');
```

### 3. SELECT

```
SELECT student_name, class_name, gender
FROM Student
WHERE class_name = '3A' AND gender = 'Male';
```

### 4. INDEX

```
-- BTREE Index on marks column for faster mark-based queries
CREATE INDEX idx_marks_btree ON Result(marks) USING BTREE;
-- TEXT Index on student_name for faster text searches
CREATE FULLTEXT INDEX idx_student_name_text ON Student(student_name);
```

## 2.3 Explanation of Constraints Used

In this part, we use several constraints to ensure data integrity, accuracy, and relationship validity. We use two code snippets as examples.

Example 1:

```
CREATE TABLE Student (
    student_id INT PRIMARY KEY AUTO_INCREMENT,
    student_name VARCHAR(100) NOT NULL,
    matric_no VARCHAR(20) UNIQUE NOT NULL,
    class_name VARCHAR(20) NOT NULL, -- 6A
    gender ENUM('Male', 'Female') NOT NULL
);
```

Example 2:

```
CREATE TABLE Result (  
    result_id INT PRIMARY KEY AUTO_INCREMENT,  
    student_id INT NOT NULL,  
    exam_id INT NOT NULL,  
    marks INT CHECK (marks BETWEEN 0 AND 100),  
    grade VARCHAR(3) NOT NULL,  
    FOREIGN KEY (student_id) REFERENCES Student(student_id) ON DELETE CASCADE,  
    FOREIGN KEY (exam_id) REFERENCES Exam(exam_id)  
);
```

| Constraint Used   | Purpose                                                       |
|-------------------|---------------------------------------------------------------|
| PRIMARY KEY       | Uniquely identifies each record.                              |
| AUTO_INCREMENT    | Automatically generates sequential IDs                        |
| UNIQUE            | Prevents duplicate entries for columns such as matric number. |
| NOT NULL          | Ensures essential fields are not empty.                       |
| ENUM              | Restricts values such as gender.                              |
| FOREIGN KEY       | Maintains relationships across tables.                        |
| ON DELETE CASCADE | Deletes dependent records automatically.                      |
| CHECK             | Ensures valid value ranges for columns like marks.            |

## 3.0 Query Demonstrations

### 3.1 Filtering

| SQL Query                                                                                                    | Result Table                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Explanation  |              |        |                 |    |       |                             |         |      |             |     |                     |              |                           |      |                  |                                                                                                                 |      |                 |    |      |             |    |      |                                                                                                                                   |
|--------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------|--------------|--------|-----------------|----|-------|-----------------------------|---------|------|-------------|-----|---------------------|--------------|---------------------------|------|------------------|-----------------------------------------------------------------------------------------------------------------|------|-----------------|----|------|-------------|----|------|-----------------------------------------------------------------------------------------------------------------------------------|
| <pre>SELECT student_name, class_name, gender FROM Student WHERE class_name = '3A' AND gender = 'Male';</pre> | <table><tr><th>student_name</th><th>class_name</th><th>gender</th></tr><tr><td>Ahmad bin Razak</td><td>3A</td><td>Male</td></tr><tr><td>Muhammad Danish bin Zulkifi</td><td>3A</td><td>Male</td></tr><tr><td>Lim Jun Hao</td><td>3A</td><td>Male</td></tr><tr><td>Wong Zhi Hao</td><td>3A</td><td>Male</td></tr><tr><td>Arun A/L Kumar</td><td>3A</td><td>Male</td></tr><tr><td>Rajesh A/L Mani</td><td>3A</td><td>Male</td></tr><tr><td>Lee Wei Han</td><td>3A</td><td>Male</td></tr></table> | student_name | class_name   | gender | Ahmad bin Razak | 3A | Male  | Muhammad Danish bin Zulkifi | 3A      | Male | Lim Jun Hao | 3A  | Male                | Wong Zhi Hao | 3A                        | Male | Arun A/L Kumar   | 3A                                                                                                              | Male | Rajesh A/L Mani | 3A | Male | Lee Wei Han | 3A | Male | This query filters students who are Male and belong to Class 3A, demonstrating the use of the WHERE clause with the AND operator. |
| student_name                                                                                                 | class_name                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | gender       |              |        |                 |    |       |                             |         |      |             |     |                     |              |                           |      |                  |                                                                                                                 |      |                 |    |      |             |    |      |                                                                                                                                   |
| Ahmad bin Razak                                                                                              | 3A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Male         |              |        |                 |    |       |                             |         |      |             |     |                     |              |                           |      |                  |                                                                                                                 |      |                 |    |      |             |    |      |                                                                                                                                   |

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | 74             | B          |           |         |                 |    |                |    |                    |         |    |   |                      |    |           |         |              |    |                      |    |              |         |    |   |                    |    |           |         |             |    |                    |    |            |         |    |   |                              |    |           |         |                        |    |             |    |                 |         |    |   |                 |    |           |         |                   |    |               |    |              |         |    |   |              |    |           |         |                                                                                                                                                                                                                    |   |             |    |       |         |    |   |               |    |           |         |    |   |               |    |       |         |    |   |            |    |           |         |    |   |            |    |       |         |    |   |            |    |           |         |    |   |            |    |       |         |    |   |                   |    |           |         |    |   |                   |    |       |         |    |   |                    |    |           |         |    |   |                    |    |       |         |    |   |              |    |           |         |    |   |              |    |       |         |    |   |            |    |           |         |    |   |            |    |       |         |    |   |                      |    |           |         |    |   |                      |    |       |         |    |   |  |  |  |  |  |  |                   |    |           |         |    |   |                   |    |       |         |    |   |                      |    |           |         |    |   |                      |    |       |         |    |   |                 |    |           |         |    |   |                 |    |       |         |    |   |                 |    |           |         |    |   |                 |    |       |         |    |   |                    |    |           |         |    |   |                    |    |       |         |    |   |                    |    |           |         |    |   |                    |    |       |         |    |   |                   |    |           |         |    |   |                   |    |       |         |    |   |                     |    |           |         |    |   |                     |    |       |         |    |   |                  |    |           |         |    |   |                  |    |       |         |    |   |            |    |           |         |    |   |            |    |       |         |    |   |              |    |           |         |    |   |              |    |       |         |    |   |            |    |           |         |    |   |            |    |       |         |    |   |             |    |           |         |    |   |             |    |       |         |    |   |  |  |  |  |  |  |                |    |           |         |    |   |                |    |       |         |    |   |              |    |           |         |    |   |              |    |       |         |    |   |                   |    |           |         |    |   |                   |    |       |         |    |   |  |

## 4.0 Optimization Section

### 4.1 Performance Comparison Before and After Indexing

#### Query 1: Marks Range Search (70-85 marks)

```
-- Query 1: Find students with marks between 70 and 85 (uses BTREE index)
EXPLAIN SELECT
    s.student_name,
    sub.subject_name,
    r.marks,
    r.grade
FROM Result r
JOIN Student s ON r.student_id = s.student_id
JOIN Exam e ON r.exam_id = e.exam_id
JOIN Subject sub ON e.subject_id = sub.subject_id
WHERE r.marks BETWEEN 70 AND 85
ORDER BY r.marks DESC;
```

#### Index Created

```
CREATE INDEX idx_marks_btree ON Result(marks) USING BTREE;
CREATE INDEX idx_result_student_exam ON Result(student_id, exam_id);
```

#### Before Indexing

|   | id | select_type | table | partitions | type | possible_keys      | key  | key_len | ref  | rows | filtered | Extra                       |
|---|----|-------------|-------|------------|------|--------------------|------|---------|------|------|----------|-----------------------------|
| ▶ | 1  | SIMPLE      | r     | NULL       | ALL  | student_id,exam_id | NULL | NULL    | NULL | 704  | 11.11    | Using where; Using filesort |

Before indexing, key used was NULL means full table scan and the rows examined is (704).

#### After Indexing

|   | id | select_type | table | partitions | type | possible_keys                                   | key                     | key_len | ref                          | rows | filtered | Extra   |
|---|----|-------------|-------|------------|------|-------------------------------------------------|-------------------------|---------|------------------------------|------|----------|---------|
| ▶ | 1  | SIMPLE      | s     | NULL       | ALL  | PRIMARY                                         | NULL                    | NULL    | NULL                         | 44   | 100.00   | Using t |
|   | 1  | SIMPLE      | r     | NULL       | ref  | exam_id,idx_marks_btree,idx_result_student_e... | idx_result_student_exam | 4       | student_exam_db.s.student_id | 16   | 44.32    | Using i |

Query 1 uses key **idx\_result\_student\_exam** instead of **idx\_marks\_btree** by default because of its composite index advantage and MySQL's cost-based optimizer. The rows examined for table Result using **idx\_result\_student\_exam** is (16) which is lower than using **idx\_marks\_btree** (312).

#### Query 2: Student Name Search

```
-- Query 2: Search students by FULLTEXT pattern (uses TEXT index)
EXPLAIN SELECT
    student_name,
    class_name,
    gender
FROM Student
WHERE MATCH(student_name) AGAINST('Lim');
```

#### Index Created

```
CREATE FULLTEXT INDEX idx_student_name_text ON Student(student_name);
```

## Before Indexing

|   | id | select_type | table   | partitions  | type | possible_keys | key         | key_len     | ref         | rows | filtered | Extra       |
|---|----|-------------|---------|-------------|------|---------------|-------------|-------------|-------------|------|----------|-------------|
| ▶ | 1  | SIMPLE      | Student | <b>NULL</b> | ALL  | <b>NULL</b>   | <b>NULL</b> | <b>NULL</b> | <b>NULL</b> | 44   | 11.11    | Using where |

Before indexing, key used was NULL means full table scan of the Student table and the rows examined is (44), all students.

## After Indexing

|   | id | select_type | table   | partitions  | type     | possible_keys         | key                   | key_len | ref   | rows | filtered | Extra                         |
|---|----|-------------|---------|-------------|----------|-----------------------|-----------------------|---------|-------|------|----------|-------------------------------|
| ▶ | 1  | SIMPLE      | Student | <b>NULL</b> | fulltext | idx_student_name_text | idx_student_name_text | 0       | const | 1    | 100.00   | Using where; Ft_hints: sorted |

After creating idx\_student\_name\_text, the key changed from NULL to idx\_student\_name\_text. This show the FULLTEXT index is activated and the rows examined become (1). This also required changing the query from LIKE to MATCH...AGAINST.

## Query 3: Identify High-achieving Student

-- Query 3: Query joining multiple tables to help teachers to identify high-achieving students.

```
EXPLAIN SELECT
    s.student_name,
    s.class_name,
    sub.subject_name,
    AVG(r.marks) AS avg_marks
FROM Result r
JOIN Student s ON r.student_id = s.student_id
JOIN Exam e ON r.exam_id = e.exam_id
JOIN Subject sub ON e.subject_id = sub.subject_id
WHERE r.marks > 50
GROUP BY s.student_id, sub.subject_id
HAVING AVG(r.marks) > 70
ORDER BY avg_marks DESC;
```

## Additional Index

```
CREATE INDEX idx_student_class ON Student(class_name);
CREATE INDEX idx_exam_subject ON Exam(subject_id);
CREATE INDEX idx_result_student_exam ON Result(student_id, exam_id);
```

## Before Indexing

|   | id | select_type | table | partitions  | type   | possible_keys      | key         | key_len     | ref                          | rows | filtered | Extra                                        |
|---|----|-------------|-------|-------------|--------|--------------------|-------------|-------------|------------------------------|------|----------|----------------------------------------------|
| ▶ | 1  | SIMPLE      | r     | <b>NULL</b> | ALL    | student_id,exam_id | <b>NULL</b> | <b>NULL</b> | <b>NULL</b>                  | 704  | 33.33    | Using where; Using temporary; Using filesort |
|   | 1  | SIMPLE      | e     | <b>NULL</b> | eq_ref | PRIMARY,subject_id | PRIMARY     | 4           | student_exam_db.r.exam_id    | 1    | 100.00   | <b>NULL</b>                                  |
|   | 1  | SIMPLE      | sub   | <b>NULL</b> | eq_ref | PRIMARY            | PRIMARY     | 4           | student_exam_db.e.subject_id | 1    | 100.00   | <b>NULL</b>                                  |
|   | 1  | SIMPLE      | s     | <b>NULL</b> | eq_ref | PRIMARY            | PRIMARY     | 4           | student_exam_db.r.student_id | 1    | 100.00   | <b>NULL</b>                                  |

Before indexing, key used limited to primary keys only and the rows examined is multiple full scans across joined tables.

## After Indexing

|   | id | select_type | table | partitions  | type | possible_keys                                   | key                     | key_len     | ref                                          | rows | fi     |
|---|----|-------------|-------|-------------|------|-------------------------------------------------|-------------------------|-------------|----------------------------------------------|------|--------|
| ▶ | 1  | SIMPLE      | sub   | <b>NULL</b> | ALL  | PRIMARY                                         | <b>NULL</b>             | <b>NULL</b> | <b>NULL</b>                                  | 11   | 100.00 |
|   | 1  | SIMPLE      | e     | <b>NULL</b> | ref  | PRIMARY,idx_exam_subject                        | idx_exam_subject        | 4           | student_exam_db.sub.subject_id               | 2    | 100.00 |
|   | 1  | SIMPLE      | s     | <b>NULL</b> | ALL  | PRIMARY                                         | <b>NULL</b>             | <b>NULL</b> | <b>NULL</b>                                  | 44   | 100.00 |
|   | 1  | SIMPLE      | r     | <b>NULL</b> | ref  | exam_id,idx_marks_btree,idx_result_student_e... | idx_result_student_exam | 8           | student_exam_db.s.student_id,student_exam... | 1    | 85.71  |

After indexing, key used changed to multiple indexes including idx\_result\_student\_exam and idx\_exam\_subject, and the rows examined dramatically reduced through indexed joins.

## 4.2 Key Improvement Observed

1. **Index activation:** Queries now utilize created indexes instead of full table scans.
2. **Rows Reduction:** From examining hundreds of rows to only relevant records.
3. **Execution Plan:** Changed from 'ALL' (worst) to 'FULLTEXT' (optimized).
4. **Join Performance:** Composite indexes significantly improved multi-table query speed.

The indexing strategy successfully transformed inefficient full scans into targeted index-based searches, demonstrating substantial performance gains across all query types.

## 5.0 Team Work

|                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Lim Yu Han            | I concentrated on maximizing database performance and deriving valuable insights from complex data as the team member in charge of indexing implementation and data retrieval queries involving grouping and string functions. I implemented BTREE and FULLTEXT indexes for the indexing section, examined query execution plans both before and after optimization, and recorded the gains in performance. This project also taught me how to write effective aggregation and string manipulation queries, how to use EXPLAIN to analyze query execution plans and how strategic indexing can significantly improve query performance.                                                          |
| Chua Jia Lin          | I was responsible for inserting data into the database, making sure that all student, subject, exam, and result information was entered correctly. Besides, I also contributed to the Data Retrieval section, especially in writing aggregation queries such as using SUM, AVG, COUNT, MIN, and MAX to generate useful insights from the data. In addition, I also wrote the conclusion for the report. Through this project, I learned how important data accuracy is, because any mistakes in the data can lead to incorrect results. In addition, I also learned that aggregation functions are very useful tools for analysing information and understanding overall trends in the database. |
| Evelyn Goh Yuan Qi    | My role in this project was to complete the data retrieval tasks, such as conditional logic, subqueries, set operations, and joins, as well as prepare the Query Demonstration section. This included selecting representative queries, capturing screenshots of the results, and writing clear explanations for each query. Through this project, I learned how to write more structured SQL queries, apply different types of joins, use subqueries correctly, and interpret query results. I also improved my understanding of how backend logic supports real system operations.                                                                                                             |
| Joanne Ching Yin Xuan | I am responsible for the database creation (DDL), writing data retrieval queries for filtering and sorting, preparing the system introduction which include background, system objectives, and team roles, and giving modification justification such as improving the report's wording, alignment, formatting, and clarity. Throughout this project, I learned how to design tables using SQL, write clearer SQL queries, communicate better with my teammates, help them when needed, and keep track of our project progress responsibly.                                                                                                                                                      |

## 6.0 Conclusion

This project shows how a student examination database can be created and used with SQL. The database stores information about students, subjects, exams, and the students' results. By using different SQL commands such as `CREATE TABLE`, `INSERT INTO`, `SELECT`, and `CREATE INDEX`, the project demonstrates how a database can help organize and analyse the students' performance. Besides, the indexing section also helps to improve the speed of certain queries, making the database more efficient.

While completing this project, we faced several challenges. One major challenge was handling a large amount of data, especially in the results table, where every student had many exam records and each student took different subjects based on their class and ethnicity. This made the data more complicated to manage and verify. Other than that, it was also difficult to ensure that all the SQL queries produced correct results. This is because some advanced queries contain many joins, conditions, and filters, which increased the complexity of the code and required careful checking. In addition, we noticed that the database performed more slowly before adding indexes, so learning how to improve performance took extra time and effort.

To improve the project in the future, several steps can be taken. First at all, better data validation could be added to make sure that marks, subjects, and student details are always entered correctly before being saved. Besides, improving the indexing strategy would also help the database to run faster, especially when handling large amounts of results. Lastly, creating clearer and more organized SQL queries would make the code easier to understand and maintain. In conclusion, these improvements would make the database more efficient, accurate, and user-friendly.
